

CALCBENCH

Next Generation Financial Data Tools

Enhance Classroom Learning

Provide your students with real-world financial data for hands-on learning, teach data analytics, or demonstrate financial analysis adjustments, Calcbench has tailored our interactive platform to benefit students and professors.

Why Calcbench?

- Provide students with a **valuable classroom experience** through exposure to real-time data from XBRL company filings via a web-based platform they can access anywhere
- Be truly innovative in your teaching through **affordable access to robust financial data, including hard-to-find normalized footnote data**
- Allow your students to work on **real life financial accounting data** both inside and outside the classroom, both through our **web interface** or directly in **Excel** using Calcbench's Excel add in
- Satisfy **AACSB** standard (A07) by using Calcbench to develop skills related to data analytics, data mining, or data reporting

Calcbench is used in many universities including: Bentley, UNC – Chapel Hill, Northeastern, Vanderbilt, Indiana, Suffolk, Bryant and UCLA.

How can Calcbench be used in the classroom?

- **Financial Accounting** classes can examine the different ways companies disclose certain information
- **Financial Statement Analysis** classes can use Calcbench analytics to compare companies to peers. Use the detailed data to make adjustments to net income for operating lease impact, or to shareholders' equity for goodwill
- **Auditing** classes can perform analytical procedures, plan the audit and examine what areas of a potential audit require more attention
- **Accounting Information System** classes can examine XBRL tagging behavior and see the benefits and opportunities in using XBRL based data
- **Business Analytics** classes can use the vast real-world data to learn and practice data mining and data analytics techniques

"Using Calcbench in several of the Master's of Science of Accounting courses provided me with one of the most amazing teaching moments of my academic career. Within minutes of being introduced to Calcbench, the students were able to navigate the program, perform analysis, and analyze complex financial statements. Their enthusiasm for the product was unanimous because they immediately saw how they could get to the heart of financial analysis without spending hours gathering information and creating spreadsheets before being able to analyze the financial statements."

– Kristine Brands, Ph.D. Assistant Professor & MSA Program Chair, Regis University
