

CALCBENCH

Next Generation Financial Data Tools

Equity Research Using Calcbench and XBRL

Whether you need easy access to as-reported financials, hard-to-find metrics, a better way to research company footnotes, or a new method for generating investment ideas, Calcbench's cutting edge research platform is a must have for the data intensive analyst.

Why Calcbench?

- **As-reported** financials spread over time...all line items **exactly as the company reported**.
- Easy access to detailed and hard to find disclosures: **Segments, taxes, business combinations, etc.**
- **Fully interactive.** Trace every number back to the source text.
- Work online or directly in your Excel models.
- Research 10-K and 10-Qs, Earnings Releases, and Proxy Statements like never before. **Jump right to the text and numbers** you need without opening a filing.
- Query on **hundreds of face and footnote metrics**, or make a specialized request for your own specific research needs.
- Our real-time data universe is updated every few minutes, **as companies file**.

Calcbench is used in top data intensive research shops, such as CFRA, Credit Suisse, and Audit Analytics.

Harnessing the Power of XBRL

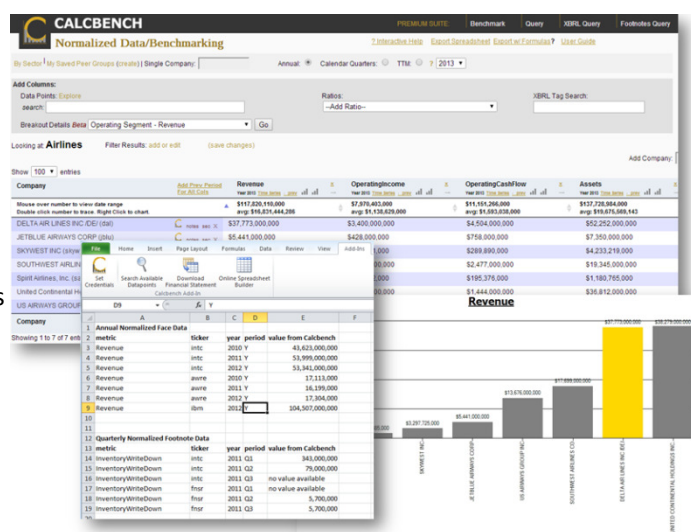

Calcbench is the first company to fully harness the power of the new interactive data standard XBRL, yielding an unprecedented direct line into the SEC's corporate financial data repository.

What's in XBRL?

Face financials and footnotes from annual and quarterly reports from 9,000 US listed public companies.

What's not?

Calcbench now has access to non-XBRL items like Earnings Releases and Proxy Statements, with more coming soon.
